

ABSTRACT

The invention aims to provide a dipeptidyl peptidase IV inhibitor which is satisfactory in respect of activity, stability and safety and has an excellent action as a pharmaceutical agent. The invention is directed to a compound represented by the following general formula or a pharmaceutically acceptable salt thereof:

wherein R^1 and R^2 each represents hydrogen, an optionally substituted C1-6 alkyl group, or $-\text{COOR}^5$ whereupon R^5 represents hydrogen or an optionally substituted C1-6 alkyl group, or R^1 and R^2 , together with a carbon atom to which they are bound, represent a 3- to 6-membered cycloalkyl group, R^3 represents hydrogen or an optionally substituted C6-10 aryl group, R^4 represents a hydrogen or a cyano group, D represents $-\text{CONR}^6-$, $-\text{CO}-$ or $-\text{NR}^6\text{CO}-$, R^6 represents hydrogen or an optionally substituted C1-6 alkyl group, E represents $-(\text{CH}_2)_m-$ whereupon m is an integer of 1 to 3, $-\text{CH}_2\text{OCH}_2-$, or $-\text{SCH}_2-$, n is an integer of 0 to 3, and A represents an optionally substituted bicyclic heterocyclic group or bicyclic hydrocarbon group.
